

## Supplementary Figure 2

### Dot plots of the pseudoautosomal region and the *HINTW* region.

Dot plots of nucleotide sequence identity in a window size of 50 bp and a step size of 1 bp. **(a)** Rectangular dot plot showing nucleotide identity between the most distal clones from the short arms of the W and Z chromosomes. The pseudoautosomal region of the Z and W chromosomes begins in telomeric repeats near the *TCF4* gene. **(b)** Triangular dot plot showing nucleotide identity on the W chromosome in the 100 kb adjacent to the *HINTW* array. Two copies of *HINTW* are tandemly repeated outside the array.
